Sarnia Chemical Plant – Reduction plan summary (OR 455/09)

Provincial regulations set out requirements for business owners to inform Ontarians about the use and creation of reportable substances in their communities. Under the Toxics Reduction Act (TRA), companies are required to develop reduction plans for prescribed substances.

The Sarnia chemical plant produces a wide range of petrochemicals using refinery and external feedstocks. These products are then used to manufacture a number of widely-used consumer products, such as plastics, in North America and around the world. Imperial has comprehensive programs in place at all of its facilities to reduce waste, prevent spills and leaks, reduce fugitive emissions, and to train personnel on the environmental responsibilities of their roles.

The following summary of the reduction plan has been prepared in accordance with Section 8 of the TRA and the requirements of Section 24 of Ontario Regulation 455/09, as amended from time to time. The summary accurately reflects the current version of the plan.

In 2016, Sarnia chemical plant prepared a new plan for the following substance:

- Isopropyl alcohol
